

GREENFIELD PROJECT DEVELOPER - ITALY

MISSION

Join us as Project Development Specialist.

With an analytical, hands-on and independent approach, your mission will be to create a portfolio of renewable Energy projects (Hybrid plants - PV and storage) ensuring high environmental regulatory standards, from the assessment of potential opportunities up to construction.

MAIN RESPONSIBILITIES

The candidate will report to the Head of Business Development, as Greenfield Project Developer.

The main responsibilities will be:

- Manage the development of solar projects from start to end
- Identify and verify land for solar project, having initial contact with landowners, negotiating and signing land leases or acquisition
- Monitor and report on greenfield or brownfield opportunities generated for PV project development;
- Coordinate with consultants, specialists, and subcontractors
- Support the engineering department in the entire permitting process up to the obtainment of construction permit, ensuring the proper follow-up of the permitting phase
- Support the engineering department and external partners in the grid access request process
- Prepare project budgets and timeline
- Manage and maintain good relationships with external stakeholders, including public entities (state, regional and local), legal and technical advisors and landowners
- Creation of good local network through participation in events related to business sectors
- Stay up-to-date on industry developments and best practices

EDUCATION, EXPERIENCE & SKILLS

Pre-requisites:

- Graduate in Engineering, Economics or Law
- 3 years' experience, preferably in PV or wind development projects in Italy
- Good understanding of Italian PV & Electricity markets
- Deep understanding of 'greenfield' development process for solar PV projects in Italy
- Fluency in Italian and good knowledge of English (B2)
- Driving license.

Know-how:

- Ability to persuade and negotiate
- Efficiency and priority management
- Passion for working with innovative business
