## Renewable Energy

### **ZE Energy wins MACSE storage tender in Italy**

Terna, the Italian national electricity transmission system operator, announced the results of the MACSE storage tender on Wednesday, October 1. The goal of the tender was to ensure the stabilization of the grid and the optimal integration of renewable production plants in Italy.

This tender, which guarantees stable revenue for storage assets over 15 years, covered a volume of 10 GWh distributed across various regions in southern Italy.

**ZE Energy's project, located in Sessa Arunca (CA), with a power capacity of 98.5 MW and a storage capacity of 832 MWh, was selected at a price of €13,750/MWh/year. This represents 42% of the allocated volumes in the Central-South region, where the average price is €14,566/MWh/year.** This stand-alone storage project, the most competitive in the region, is expected to be connected to the grid in January 2028.

ZE Energy confirms its position as a key player in hybrid co-located plants and "stand-alone" batteries. These systems help manage and increase the value of integrating photovoltaic electricity into the grid and accelerate the large-scale deployment of dispatchable solar electricity for local consumption and achieving European climate goals.

*"The ambitious goal of Italy—reaching 70% renewable electricity by 2030—places solar energy and storage at the heart of the energy transition. This victory confirms our growth in the Italian market and highlights ZE Energy's expertise in designing and optimizing energy storage systems and their integration into the electricity transmission grid,"* says **Mathieu Lassagne, CEO of ZE Energy**.

*"With this highly competitive bid, ZE Energy becomes one of the major players in energy storage in Italy. We will continue to work with the teams to submit other projects for the upcoming MACSE tender rounds,"* says **Antonio Bilella, Country Manager ZE Energy Italia**.

**About ZE Energy** - <https://ze-energy.com/en/>

Founded in 2019 in France, ZE Energy is a pioneer in hybrid photovoltaic plants combined with co-located or "stand-alone" batteries. These innovative solutions allow better integration, management, and increased value of solar electricity production in grids and electricity markets. ZE Energy develops, finances, builds, and operates hybrid plants and batteries, and sells green energy to end consumers or through tenders. The company currently has a portfolio of over 1 GW in hybrid photovoltaic projects, including more than 400 MW of battery storage. ZE Energy operates in France, Italy, and Germany.
